Project Name: Fin-Cash

Objective

Ensure full setup of the development environment, verify repository configuration, run the application, and assess existing technical architecture and user flows.

System Scope

Fin-Cash is a financial management platform designed for schools to track revenues (Custody), log categorized expenses (Maintenance, Utilities, etc.), and monitor real-time balance metrics.

Technology Stack Identified

- Backend Framework: .NET 8 / 9 Web API (C#)
- Data Access & ORM: Entity Framework Core 9.0 (SqlServer, Design, Tools)
- Authentication & Security: JWT Bearer Authentication (Microsoft.AspNetCore.Authentication.JwtBearer)
- API Documentation: Swagger / OpenAPI (Swashbuckle.AspNetCore 6.6.2)
- Frontend Framework: React.js / Next.js SPA
- Database Engine: Microsoft SQL Server

Execution & Setup Steps

- Repository & Directory Navigation: Cloned repository and navigated to the inner /Backend project folder.
- Dependency Verification: Verified Entity Framework Core 9.0 packages and Swagger integration via .csproj dependencies.
- API Service Execution: Built and launched ASP.NET Core API services using dotnet run command.
- Frontend Execution: Started Next.js development server using npm run dev.
- Endpoint Testing: Accessed Swagger UI interactive documentation at http://localhost:5207/swagger.
